Abstract. This research to determine whether the Effect of Local Tax Revenues, Local Retributions and Results of Management of Disseminated Area Wealth to regions significantly Local Core Revenue in Bogor District. The research method used was descriptive by using secondary data obtained from Realization of Regional Revenue and Expenditure Budget Report of Bogor Regency. Data collection method used was Documentation and Library with quantitative approach. The data in this research was entirely transformed into Natural Logarithm form first so that data can be normal distribution. After data was collected, data were analyzed using SPSS program to test Local Tax Revenues, Local Retributions and Results of Management of Disseminated Area Wealth significantly related with Local Core Revenue either partially with correlation significance test and simultaneously. The analytical tool used was SPSS (Statistic Product and Service Solution) 23 Version. The results of this study indicate that the Local Tax variable has a significance value of 0,000, where the value Sig. below 0,05, so that the Local Tax variable significantly partial to the Local Core Revenue. Local Retributions variable has a significance value of 0,076, where the value of Sig. upper 0,05, so that the Local Retributions variable relates not significant partially to the Local Core Revenue. Results of Management of Disseminated Area Wealth variable has a significance value of 0,076, where the value of Sig. upper 0,05, so that the Local Retributions variable relates not significant partially to the Local Core Revenue. Based on the tests that have been done Local Tax Revenues, Local Retributions and Results of Management of Disseminated Area Wealth obtained R value of 0,999 which means together independent variables are strongly interconnected with Local Core Revenue.

Keywords : local tax revenues, local retributions, results of management of disseminated area wealth and local core revenue
